¹Relative prominence of scientific literature is measured on the basis of the relative citation index of the region. This index is the share of the country/region's share of cited literature adjusted for its share of published literature. An index of 1.00 would indicate that the region's share of cited literature is equal to the region's world share of scientific literature. An index greater (less) than 1.00 would indicate that the region is cited relatively more (less) frequently than is indicated by the region's share of scientific literature.

See explanatory notes, if any, and SOURCE at end of table.

Appendix table 5-51.

Relative prominence of scientific and technical literature, by region: 1990–99
 (Percentages)

Year	United States	Latin America	Sub-Saharan Africa	Near East and North Africa	Western Europe	Eastern Europe	East Asia NIEs	Asia and Pacific
